Fibonacci Spiral version. Simple and intuitive application. Saves the values of the parameters. The changes applied to the spiral automatically. Fibonacci Spiral has all the good qualities to be a classic model for teaching the basics of series. How to play it? To build the spiral, you only need to specify the initial value of the angle (in degrees). You can specify the number of arms of the spiral, which can be done by specifying the number of rows (Rows). The program automatically builds the spiral with a constant angle, thus a larger number of arms can lead to a nonuniform spiral. Build the desired spiral Fibonacci Spiral Conclusion: Fibonacci Spiral comparison with other Spirals. Average of results. In addition to Fibonacci Spiral, we have tested Spirals by others, such as Fibonacci Growth Curve and some other models. Spiral Growth Curve This model simulates the rapid growth of the Fibonacci series. It is one of the most popular models for teaching series. The width of the lines is proportional to the number of data. As these lines grow, the program automatically adds the next value. The horizontal lines are initially blank and then fill in with the Fibonacci series, just like the spirals. This model is easy to use because it does not require the user to specify any parameters for the creation of a spiral. Spiral Growth Curve Comparison with other Spirals Average of results.
